QUALITY DESIGNWORKS

DESIGN BUILD REMODEL

STEP 1 Initial Consultation

Quality DesignWorks is a full service, turnkey, design and build company. Shaped from the knowledge and experience gained through our sister company, Quality Plumbing - serving the construction industry since 1984, Quality DesignWorks set out to create a more streamlined construction and remodeling process.

Our experienced team including building contractor, interior designer and professional installers, help you bring your dream home from concept to completion, on time and on budget.

We assist clients with a wide range of challenges including: selection of custom cabinetry with desired color palette, organizational and storage solutions, space planning, provided renderings to assist with a visual concept, and project buying and sourcing ranging from tile to stone, cabinetry, appliances, fixtures, etc.

Here's more about the process you will experience with Quality DesignWorks.

Heather Stephens
*AKBD Certified Kitchen and
Bath Designer*

Meet with your personal project manager and designer to discuss your specific needs and wishes. The initial consultation would be at our design showroom where you can explore our over 3,000 square feet of functional rooms and pieces, as well as, a variety of samples for flooring, cabinetry, and fixtures. We will discuss the function and size of the space, budget and any special needs to help determine the best parameters and options for your project.

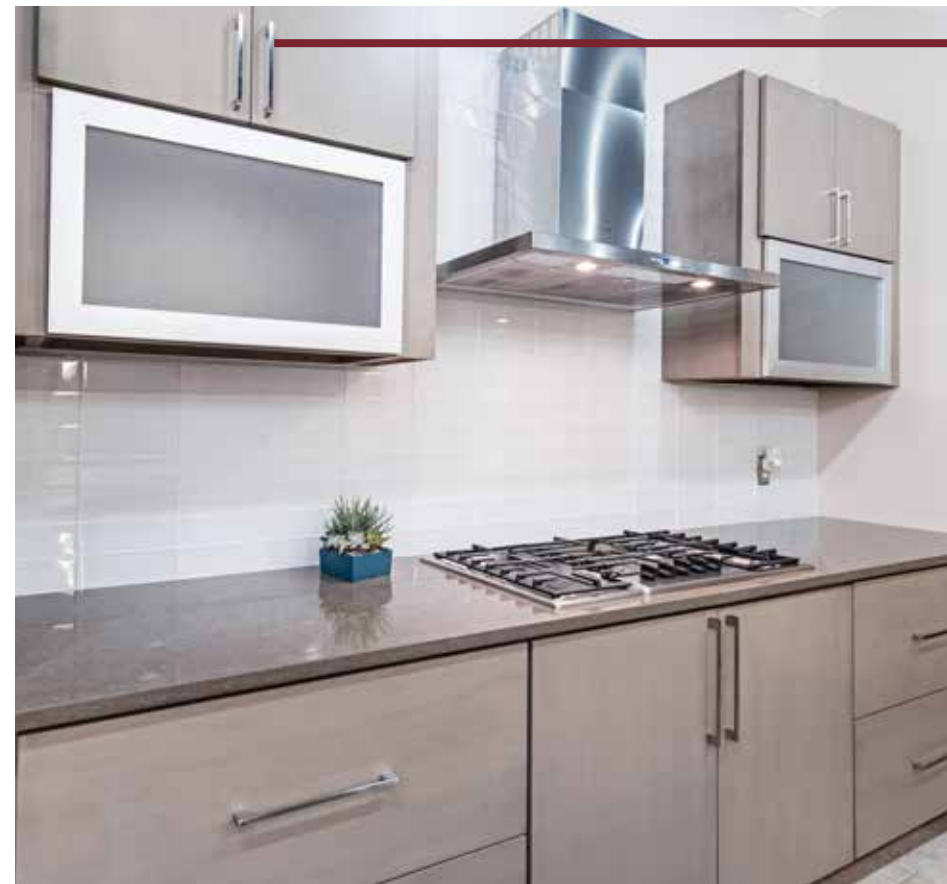

STEP 2 Home Visit

After the initial consultation we will schedule a visit to the project site, taking necessary photos and detailed measurements. Our full team will meet to review the entire project scope and begin creating a project proposal. Using the latest technology and design software, we produce a three-dimensional rendering and digital, virtual tour.

STEP 3 Proposal Meeting

Once our project proposal and presentation are complete, you will meet again with your designer at our showroom for review. Based on your feedback and choices, we then prepare a detailed estimate and upon your review, make any necessary adjustments. We pride ourselves on offering suggestions that result in the highest quality materials and function options for your desired investment.

STEP 4 Live in Your Dream

Next, we get to work. The biggest difference you will experience with Quality DesignWorks is that in addition to having a full-time designer, we are certified building contractors. Our ready team of licensed, trained and experienced professionals handle every phase of the process: structural changes such as taking down or putting up walls, electrical and plumbing, flooring and cabinetry, countertops and hardware, fixtures and appliances. Your designer oversees every detail right down to paint colors, special functions and organizing needs. When we say it's all in one place, we mean it.

Visit Our Showroom

Explore our 3,000 square foot design showroom located just off Highway 441 between Gainesville and Alachua. Here you will encounter an open plan that lets you move freely through the various vignettes. With full size displays, we've made it easy for you to picture the possibilities for your home. You can experience the latest trends in design and function, first hand. Our project manager and design team will help you every step of the way for the most efficient remodeling process you'll ever experience.

Remodeling and building isn't the cleanest process; however, we take great care and consideration that this is your home. Our workers are as clean and protective as possible throughout the entire process. Upon completion, we have a cleaning team that will leave your new space ready for you and your family to enjoy. Furthermore, as part of our commitment to sustainability, we repurpose or reuse appropriate materials being removed or replaced from your home.

ALL UNDER ONE ROOF:

- Architectural design, interior design and structural engineering
- Carpentry, flooring, painting, masonry and lighting
- Custom cabinetry, countertops, glass, fireplaces and specialized ovens and hoods
- Appliances
- Electrical work, plumbing, heating, ventilating and air conditioning
